PROFESSIONAL SUMMARY

Computer Science undergrad passionate about building intelligent web applications. Skilled in MERN stack and CNN model deployment with REST APIs. Experienced in full-stack development and AI integration for real-world use cases.

PROJECTS

Tyre Crack Detection

MERN(MongoDB,Express,React.js,Node.js),CNN

[Source Code](#)

- Developed a **CNN** model to classify tyres as cracked or normal using tyre images.
- Developed REST APIs with Node.js/Express for seamless integration between TensorFlow model and **React** frontend.
- Designed and built a clean and modern website using **MERN stack**
- Optimized website for **speed and user experience**
- Utilized **responsive design** to ensure compatibility across all devices
- Impact** : Helps reduce road accidents caused by faulty tires

Chest X-Ray Image Captioning

MERN(MongoDB,Express,React.js,Node.js),CNN,NLP,CV

[Source Code](#)

- Trained an **image captioning model** to generate descriptive captions based on given X-ray images.
- Developed a **CNN** model to identify specific lung diseases from the X-rays.
- Hybrid architecture combining InceptionV3 (feature extraction) and RNN decoder (caption generation)
- Achieved BLEU-4 score of 0.62 through attention mechanism and beam search decoding.
- Created a **MERN** application to display generated captions and detailed disease reports.
- Impact** : This project helps radiologists generate reports more quickly.
